Professional Summary

Detail-oriented **Software Developer** with experience building **responsive web applications, backend business logic, and RESTful APIs** in Agile environments. Proficient in **Java, JavaScript, SQL**, and modern web technologies, with hands-on experience in **database-driven systems, code reviews, testing, and technical documentation**. Strong collaborator with experience supporting **government systems** and delivering reliable, maintainable solutions.

Education

Algonquin College – Computer Engineering Technology (Computing Science)

Sep 2021 – Sep 2024 | GPA: **3.73 / 4.0**

Project

API Interface Open Platform | [Github](#) | [LiveDemo](#)

Technologies: **Spring Boot** **Spring Cloud Gateway** **Docker** **Swagger + Knife4j** **Dubbo** **MyBatis-Plus**

- Developed **secure RESTful APIs** supporting **user registration, authentication, and permission management**
- Implemented backend services using **Spring Boot** with **JWT-based authentication** and **request validation**
- Applied **rate limiting** and **Redis caching** to improve **system stability, performance, and scalability** under concurrent access
- Designed a **scalable gateway-based architecture** using **Spring Cloud Gateway** and **Docker**
- Built **extensible API interfaces** to support **system integration** and **programmatic clients**

Full Stack Web Application | [Github](#) | [LiveDemo](#)

Technologies: **React** **Node.js** **Spring Boot** **Spring Security** **Mysql** **Spring Data JPA** **REST API**

- Developed **responsive web interfaces** using **React, HTML, and CSS** to support business workflows
- Implemented backend business logic and **RESTful APIs** using **Spring Boot**
- Designed and maintained **relational database** schemas using **MySQL** and **Spring Data JPA**
- Configured **CI/CD pipelines** using **Jenkins** and **Docker** to support reliable deployment
- Wrote **unit tests** and integration tests to improve code quality, reliability, and maintainability

Professional Experience

IT Analyst- Agriculture and Agri-Food Canada

Sep 2022 – Dec 2022 / Sep 2023 – Sep 2024

- Conducted **software and hardware testing** for internal systems, identifying and resolving critical bugs before production release.
- Analyzed backend data workflows and database queries supporting large internal datasets, **improving system performance by 15%**.
- Maintained and updated the **inventory management system**, improving **data accuracy and reducing inconsistencies by 20%**.
- Collaborated with a cross-functional **Agile** team to support sprint planning, daily standups, and feature testing.
